DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8, 10, 13-18, 25-27 and 29-38 are rejected under 35 U.S.C. 102(b) as being anticipated by Oehy et al. (US 5,645,606).

Oehy et al. disclose an acetabular shell or cup 5 having: a first surface, a second surface oriented toward bone; openings 12 extending from the first surface to the second surface wherein each opening 12 has an extended nonthreaded frustoconical taper section 25, a rounded section with a concave surface 25a beginning at a narrow end of the frustoconical section; each opening 12 capable of receiving any type of fastening element or insertion member; and insertion member such as a cover or “plug” 15 or a fastening element 14 with spherical undersurfaces (16a, 14a) seatable in surface 25a in a plurality of angular positions and sealing off through-hole 12 (Figs. 1-2, col. 2, lines 45-67, col. 3 and col. 4, lines 1-6).

Regarding claims 17, 26 and 30, Oehy et al. disclose that their acetabular prosthesis including an outer shell 5 and an inner shell or “liner” 6 is used as a joint socket 2 in a hip joint prosthesis wherein a joint head 3 is fastenable in a femur by a shank part or “stem” and articulates with joint socket 2 (Fig. 2 and col. 2, lines 28-31).

The method steps of claims 27 and 29-38 are performed during use of the Oehy et al. acetabular prosthesis in a hip joint prosthesis for hip arthroplasty.

Response to Arguments

Applicant's arguments submitted under "REMARKS" in the response filed on November 10, 2005 have been considered but are not persuasive for the following reasons.

Oehy et al. disclose that openings 12 have a conically shaped inner end portion and an approximately spherical support surface 25a formed between the end portion and the circumferential part 27 (col. 3, lines 3-8). Oehy et al. disclose that a closure plug or "insertion member" 15 can be placed in opening 12 wherein insertion member 15 has a sealing surface 16a that clearly contacts the frustoconical inner end portion when member 15 is inserted into opening 12.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
